

Dear Physician Colleague,

I am writing this letter to inform you that I have agreed to run for US Congress in Nevada's third Congressional District. I am running because it has become clear to me that if our current politicians continue to be in charge of healthcare in this country, they will put healthcare even more deeply in the control of the giant corporations that put profit over patients, preventing all of us from providing to our patients the care we know they need.

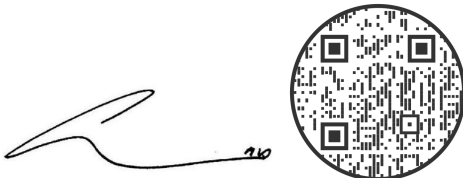

In Nevada alone insurance companies harvest hundreds of millions of dollars a year from our state's healthcare system. The benefit they claim to provide is cost control. However, as Warren Buffet pointed out earlier this year, we had the best healthcare in the world in the 1980s and it cost 8% of GDP, but today we have the worst healthcare of any developed nation and it costs us 18% of GDP. Insurance companies are costing America more and providing less. If America is going to be competitive internationally, this will have to change immediately.

Politicians on the left keep advocating for a single-payer solution to healthcare. Even some politicians on the right have started to believe this is the right path. It seems people think the only alternative to our current system is a single payer healthcare system. But there is a better way. A way that returns our quality of care to number one in the world, the way it was in the 1980's. A way that returns decision-making power to the physicians instead of insurance bureaucrats. A way that saves our country up to 10% of GDP, which is savings we can use to pay down debt, fund social security, defend our borders, rebuild infrastructure and develop new technologies.

Our current President is willing to burn down systems laden with bureaucracies, captured by corporate interests and replace them with institutions laser-focused on serving the best interests of the people of our country. We have a once in a generation opportunity to reshape healthcare in this nation in a way that puts patients first. I have written extensively on this topic. I can provide the leadership our Congress needs to rebuild healthcare to restore our status as a global leader. But I can't do it without your help.

I need your help letting your patients and neighbors know healthcare is the most important issue in this next election cycle. I need your help letting them know what you feel the best outcome for this election would be. I also need your help with the unfortunate reality of modern elections, that it is necessary to raise substantial funds to win a Congressional election. Susie Lee already has \$4 million dollars. If she wins, she is not going to be able to improve healthcare in this country. All of our patients will suffer, and the economy of our country will suffer. I humbly ask for your support.

Respectfully,

Aury Nagy, MD

Immediate Past President, Nevada State Board of Medical Examiners
